Leonardo partnership project

2012-1-FR1-LEO04-35521 1

Minutes of the third transnational meeting at Wageningen, the Netherlands, 7 and 8 October 2013

Participants:

- Greta du Velay
- CEPS
- Droit et Devoir
- BBAG
- Timelab
- Nieuwland Automatisering BV

Monday 7 October 2013 start of the meeting at Nieuwland in Wageningen.

Arrival at "Aan de slag", a consumer run project by day care patients and clients. A short introduction by Wouter den Blanken, followed by a tour through the workplace.

1. Presentation of the project:

"Aan de Slag" is a day care project aimed at re integration of patients and clients into regular activities. For some this means coming to the project site and participate at regular hours. And for some it means a preparation for a regular job.

This project is a co operation of the regional health council and Nieuwland.

2. Intermediate reports evaluation

Not all partners have received the evaluation .

3. The documentation process and the information process

Timelab gave a short presentation of the Springpad. Com website. It will be used as a central forum to exchange ideas and publish the achievements of the national projects. The main exchange themes will be: technical, software and products.

All partners will publish on Springpad their selection process of the 3d printer. The list of criteria / questions will be attached to these minutes.

4. The competition between learners.

At 12 December 2013 all partners will upload a self designed (couple of) object(s) to Springpad. It 's the idea of a creative process instead of copying an object from the internet.

5. Planning of the next meetings

The next meeting will be in Barcelona, Spain, at 18 and 19 of February 2014, then the last meeting will be in Potsdam, Germany, from 20 – 21 st of may 2014.

Summary discussion Monday

We have decided to put the following information **per partner** onto Springpad.

We are going to put all this information into Springpad. There will be 3 topics:

1. The process of choosing a 3D printer

What is our experience in choosing a 3D printer?

Why did you choose this printer?

What would you do differently next time?

How much did you spend on your printer?

2. The process of building the printer

What problems did you encounter?

Was it easy to build this for your learners?

3. The process of using the printer

How much time do you spend on maintenance of your printer?

Do you organise courses to learn how to use the printer?

How do you train your trainers?

How do your learners share their knowledge about the printers?

How do you learn how to use the printer?

What other activities did you do? (documenting, website)

What to print with the printer?
