Summary discussion Monday

We have decided to put the following information **per partner** onto Springpad.

We are going to put all this information into Springpad. There will be 3 topics:

1. The process of choosing a 3D printer
What is our experience in choosing a 3D printer?
Why did you choose this printer?
What would you do differently next time?
How much did you spend on your printer?

2. The process of building the printer
What problems did you encounter?
Was it easy to build this for your learners?

3. The process of using the printer
How much time do you spend on maintenance of your printer?
Do you organise courses to learn how to use the printer?
How do you train your trainers?
How do your learners share their knowledge about the printers?
How do you learn how to use the printer?
What other activities did you do? (documenting, website)
What to print with the printer?
